

Job Description: Data Engineer (m/f/o)
Location: Düsseldorf, München and Frankfurt

For our locations in Düsseldorf, Munich and Frankfurt we are looking for a full time: Data Engineer (m/f/o)

Main duties and responsibilities

- You will develop highly scalable applications for data-driven decision making, optimized for high data volume or low latency access as per request
- Work in interdisciplinary teams with Big Data Specialists, Data Scientists and Project Managers
- You will provide valuable input to our customers Big Data and Data Science applications in the context of Customer 360
- With your expertise, you will advise our clients on the use of various Big Data Tools - also on site
- The artifacts you create are the foundation for data integration platforms, real-time decision-making systems or predictive modeling and data manipulation

Qualification:

- The minimum educational requirement is an undergraduate degree in the field of Mathematics, Business Informatics, Computer Science or a comparable qualification
- Software development using programming languages such as Scala, Python, Java, R and SQL
- Practical experience with tools from the Hadoop ecosystem, in particular with HDFS, Hive, Impala, Spark and Kafka
- Ability and experience in working together in several development teams
- Responsible individual work
- English (Fluent)
- German (Independent User)
